DEVANSH KASHYAP

SOFTWARE DEVELOPER — SYSTEMS · LANGUAGES · WEB

devansh14007@gmail.com • 9315858470 • github.com/kashyap-devansh • devanshkashyap.vercel.app

Computer Science undergraduate who builds software from the ground up — interpreters, database engines and terminal tools in C and C++, and interactive web apps in React.

EDUCATION

Jaypee University of Information Technology (JUIT) — Solan, Himachal Pradesh
B.Tech in Computer Science Engineering — *Expected 2029*

Maharishi Markandeshwar International School — Sadopur, Ambala
Higher Secondary Education — 83.2% — *2025*
Secondary Education — 81.2% — *2023*

TECHNICAL SKILLS

Languages: C, C++, JavaScript
Web: React, HTML, CSS, Framer Motion, Vite
Systems: Linux (Omarchy), Windows, Bash
Tools: Git, GitHub, Neovim, VS Code
Core Interests: Systems Programming, Compiler Design, Data Structures & Algorithms

PROJECTS

DSA/Animator — Algorithm Visualizer — React · JavaScript

- Built an interactive, code-synced visualizer that runs real algorithms step by step beside syntax-highlighted source, highlighting the executing line.
- Designed a shared playback engine (play, pause, step back/forward, speed) with live comparison and swap counters across sorting, searching, linked list, stack, queue and recursion visualizers.

Ark — SQL-like Database Engine — C++

- Built a lightweight SQL-like database engine from scratch with a hand-written tokenizer and recursive descent parser.
- Implemented typed tables, full CRUD operations and file persistence with no external dependencies.

Curio — Custom Interpreted Programming Language — C

- Designed and built a custom interpreted language from scratch with its own tokenizer and symbol table.
- Implemented control flow handling and a modular interpreter architecture.

Scrive — Vim-inspired Terminal Text Editor — C++

- Built a terminal text editor with modal editing and custom screen rendering.
- Added configurable keymaps and persistent file handling.

UNO-Engine — Terminal-Based Card Game — C++

- Developed a terminal UNO game with a polymorphic card system and game state management.
- Implemented the complete 108-card deck with all standard UNO rules and turn logic.

Ledger — Inventory Management System — C

- Built a terminal inventory system with role-based login and product & supplier management.
- Implemented a cart system and order tracking using file-based persistent storage.

EXPERIENCE & ACTIVITIES

Member, ACM Student Chapter — JUIT

- Actively participating in technical events, coding contests and workshops run by the ACM chapter.

Hackathon Team Leader — MURIOUS

- Led a team at the MURIOUS hackathon, coordinating development tasks and driving problem-solving strategy.
- Managed team collaboration and delivered the project under tight time constraints.

SOFT SKILLS

Leadership • Teamwork • Communication • Pattern Recognition • Pressure Handling
